Brute Force Cracking

Also known as the exhaustive method. It is a password cracking method where each possible password is tried until the correct one is found.

Remote Log-in

Log-in behavior occurring in areas not frequently logged into.

Malware

Malware refers to software or programs that can harm computer system security.

DDoS

Refers to Distributed Denial of Service attack. DDoS involves flooding the target server or its peripheral infrastructure with massive internet traffic to disrupt normal traffic. Common attack types include SYN, UDP, and ICMP flood attacks.

WAF

The web application protection system is a product designed to provide specialized protection for web applications by implementing a series of security policies targeting HTTP/HTTPS.
