September 2021

Update	Description	Release Date	Documentation
Launched TDMQ for CMQ	TDMQ for CMQ is a distributed message queue service that features a reliable message-based async communication mechanism. It enables message sending/receiving among different applications deployed in a distributed manner (or different components of the same application) and stores the delivered messages in reliable and valid message queues to prevent message loss. It supports multi-process simultaneous read/write, so that message sending and receiving do not interfere with each other, eliminating the need for the applications or components to keep running.	2021-09-23	Overview

TDMQ for CMQ Billing Start

Last updated : 2022-06-29 11:15:17

The free beta test of TDMQ for CMQ ended on May 11, 2022, and billing has officially started. To reward you for taking part in the beta test, you can use existing resources for one month free of charge. New resources are billed by API calls and queue/topic quantity, with certain free tiers available. For more information, see [Pricing Overview](#).
