Console Guide

Adding a Domain

Last updated : 2022-06-22 14:46:10

Overview

This document describes how to add a domain to be resolved in HTTPDNS.

Prerequisites

You have [activated HTTPDNS](#).

Directions

1. Log in to the [HTTPDNS console](#).
2. Click **Domain Management** on the left sidebar and click **Add primary domain**.

3. In the **Add primary domain** pop-up window, enter the domain to be resolved.

Note :

- You only need to add a primary domain, such as `tencent.com` . After it is added, DNS will also take effect for its subdomains.
- You can add up to **200** domains.

Add primary domain ✕

Primary domain *

Confirm Cancel

4. Click **Confirm**.

Note :

- After adding a domain successfully, you can view its DNS query details on the details page. For more information, see [Viewing a Domain](#).
- If you want to connect a domain not by adding it in the console, you can [contact customer service](#) for assistance.

DNS Statistics Description

Last updated : 2022-06-22 15:55:12

Overview

This document describes how to view the DNS statistics of a domain.

Directions

1. Log in to the [HTTPDNS console](#).
2. Click **Domain Management** on the left sidebar and click the target domain.

Primary domain	Query volume this month	IPv4 query volume this month	IPv4 query volume this month	Operation
www.com	0	AES 0	AES 0	删除
		DES 0	DES 0	
		HTTPS 0	HTTPS 0	

共 1 条 20 条 / 页 1 / 1 页

3. On the **Query volume details** page, you can filter data by different conditions:

- **Filter by subdomain:** You can filter data by subdomains of the domain.
- **Filter by protocol:** You can filter data by protocols of the domain.
- **Filter by time:** You can select a time period to display data.
