Access Guide

Last updated : 2020-08-25 10:35:30

This document describes how to access the GME SDK.

Creating Service

Creating application

1. Log in to the [GME Console](#) and click **Service Management** on the left sidebar.
2. Enter the service management page and click **Create Application**.

Entering information

Enter the required information on the page and select the service you need.

- For billing details, please see [Product Pricing](#) or consult your Tencent Cloud rep. The settings can be modified afterwards.
- The settings for the voice messaging and speech-to-text service can be modified at any time.

[←](#) **Create Application**

Application Info
Application Name
Project
Tag [Add](#)

You can classify and manage resources by setting tags, with up to 50 tags for each resource. [Tag Management](#)

Real-time Voice Service
Service Enabled/Disabled ☒ Enable ☐ Disable
Sound Quality ☐ General ☐ HD

General quality is billed by voice DAU and HD quality is billed by voice duration. [View Details](#)

Speech-to-Text Service
Service Enabled/Disabled ☒ Enable ☐ Disable
Supported Languages ☐ Standard mode ☐ Enhanced mode

Standard mode supports only Mandarin Chinese, Korean, and English, while enhanced mode supports all languages. These two modes have different prices. For details, see [Billing Rules](#)

Setting Service

Viewing application

The `AppID` in the list is used as a parameter when accessing the SDK for development.

Application Name	AppID	Creation Time	Application Status	Service Status	Operation
GME	1400355150	2020-04-21 17:18:56	Normal	 	Settings Usage Statistics

Setting application

Click **Settings** to enter the application information module and click **Modify** to modify the information as needed.

Authentication Info [Reset Key](#)

AppID

Permission key

Authentication information

- The permission key in this module is used as a parameter when accessing the SDK.
- Change of the key on this page takes effect within 15 minutes to 1 hour. You are not recommended to change it frequently.
- Only the account that creates the game, root account, and global collaborators can **reset the key**.

- For more information on how to use authentication, please see [Authentication Key](#).

Enabling/Disabling business

You can enable or disable businesses and services here.

Application Name	AppID	Creation Time	Application Status	Service Status	Operation
GME	1400355150	2020-04-21 17:18:56	Normal	 	Settings Usage Statistics

Downloading SDK

1. Download address

Please download the relevant demo and SDK in the [SDK Download Guide](#).

2. Preparations for access

To access the SDK, you need to use the `AppID` and related permission keys provided by Tencent Cloud, i.e., the `AppID` in the application management list and the authentication information in the application settings.

For more information on platform-specific configurations, please see the project configuration document for the platform.

3. Usage tips for official demo

The demo has a Tencent Cloud test account for functionality trial. If you want to use your personal or corporate test account, you need to replace the `AppID` of the Tencent Cloud test account on the corresponding page of the demo with the `AppID` you get in the console and change the permission key of voice chat in the `AVChatViewController-GetAuthBuffer` function.

API Documentation

Operation Guide

Last updated : 2020-05-06 16:31:14

This document describes how to view the console usage statistics in the GME SDK, which divide into three services: voice chat, voice messaging and speech-to-text, and phrase filtering.

Log in to the [GME Console](#) and click **Usage Statistics** in the application you want to query.

Application Status	Service Status	Operation
Normal	 	Settings Usage Statistics

Usage Statistics of Voice Chat

The usage statistics display the DAU data of a voice chat application.

- By default, the total DAU data for the last 7 days is displayed, and the usage data for different time periods and regions can be viewed.
- **Voice Duration**: it displays yesterday's voice duration information of the application.
- **Voice DAU**: it displays yesterday's voice DAU information of the application.
- **Voice PCU**: it displays yesterday's voice PCU information of the application.
