Tencent Infrastructure as Code (TIC) is an open Infrastructure as Code (IaC) platform developed by Tencent Cloud. By integrating leading open-source technologies, TIC allows you to manage your cloud infrastructure in an efficient, cost-effective, and secure manner.

TIC offers three features: resource orchestration, configuration management, and compliance check. It supports the HCL (Terraform) syntax, and offers multiple public templates built upon Tencent Cloud best practices to simplify usage.

Strengths

TIC continues to integrate industry-leading products to offer you the best TIC practices. Compared with other IaC products, TIC has the following advantages.

Free of charge

TIC is completely free of charge. All features are based on technologies independently developed by Tencent Cloud and open-source technologies. You will only be billed for the cloud resources created.

Multi-cloud support

As an open platform, TIC allows you to deploy, migrate, and manage cloud resources both in Tencent Cloud and in multi-cloud scenarios. TIC currently supports resource orchestration and configuration management of major cloud service providers, and will support more in the future to meet your business needs.

Ease of use

TIC supports Terraform and is compatible with the HCL (Terraform) syntax. You can obtain relevant learning materials from the internet to get started easily. TIC also provides different templates to help you build your own infrastructure by modifying some basic parameters.

Comprehensive IaC

TIC not only supports basic resource orchestration, but also configuration management, application deployment, and compliance check. TIC allows you to improve efficiency, while reducing operational costs and risks.

Diverse templates

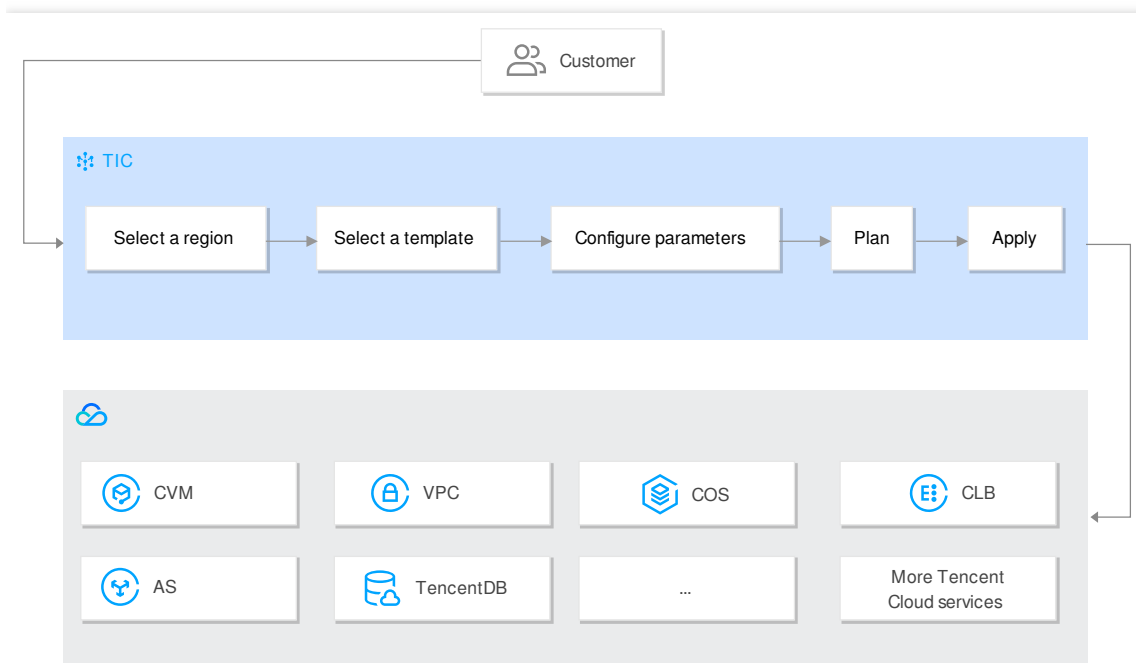

TIC supports public and private templates. Private template management allows you to use existing infrastructure, while saving and managing successful infrastructure cases. Public template management provides you with industry best practices, serving as a reference for you to use and optimize the infrastructure.

Use Cases

Last updated : 2020-08-13 09:31:19

Quickly creating Tencent Cloud infrastructures

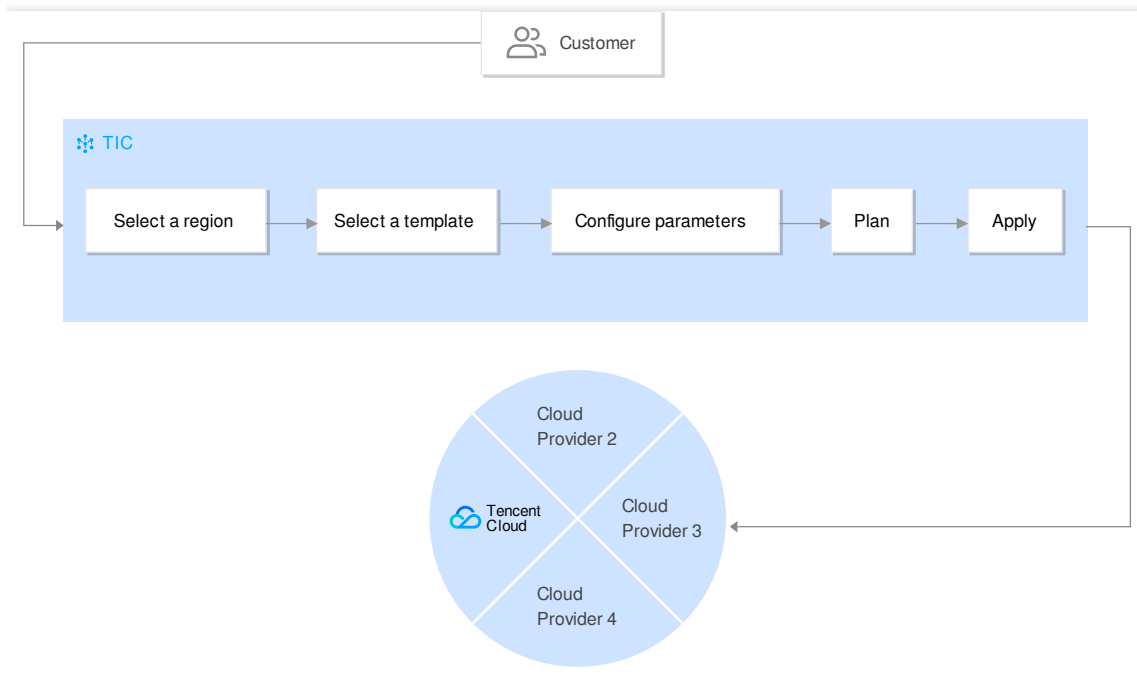

If you need to quickly create multiple identical infrastructures, such as creating the same infrastructure in different regions or enabling cross-region disaster recovery, TIC is an ideal choice. It helps you avoid repeated operations in the console, reduces the cost of learning API usage, and lowers the risk of misoperations. You only need to specify a region, select an existing template, modify required parameters, and submit configurations to create corresponding infrastructures.

Deploying an infrastructure in a multi-cloud environment

If you need to build an infrastructure in a multi-cloud environment to enable cross-cloud resource management and migration, TIC is an ideal choice. It calls APIs based on different cloud service provider resources, and builds a multi-

cloud infrastructure based on resource dependencies.

Cloud Service List

Last updated : 2020-09-25 14:30:21

The following table lists the cloud services supported by Tencent Infrastructure as Code (TIC).

Type	Cloud Service
Computing	Cloud Virtual Machine (CVM)
	Auto Scaling (AS)
Storage	Cloud Object Storage (COS)
	Cloud File Storage (CFS)
	Cloud Block Storage (CBS)
Networking	NAT Gateway
	Virtual Private Cloud (VPC)
	Elastic IP (EIP)
	Elastic Network Interface (ENI)
	VPN Connections
	VPC ACL
	Direct Connect (DC)
	Cloud Connect Network (CCN)
	Cloud Load Balancer (CLB)
	High-Availability Virtual IP (HAVIP)
Database	TencentDB for MongoDB
	TencentDB for MySQL
	TencentDB for Redis
	TencentDB for SQL Server
	TencentDB for TcaplusDB (TcaplusDB)

Type	Cloud Service
Middleware	API Gateway
	Message Queue CKafka
Network security	Anti-DDoS
CDN & acceleration	Content Delivery Network (CDN)
	Global Application Acceleration Platform (GAAP)
Container	Tencent Kubernetes Engine (TKE)
Domains & websites	SSL Certificates Service
Application security	Web Application Firewall (WAF)
Serverless	Serverless Cloud Function (SCF)
Monitoring & OPS	Cloud Monitor (CM)
Management & auditing	Cloud Audit (CA)

To view the parameter configuration of each cloud service, log in to the TIC console and click **Details** in the [Resource Types](#) list.
