Service Description

PTS includes web penetration tests, app penetration tests, and binary penetration tests as compared below:

Service Category	Service Level	Feature Details	Website Type Identification
Web penetration test	It provides the penetration test service for important business systems, which simulates attack and vulnerability discovery techniques used by hackers to verify the security of target information systems.	Level 1	• Displaying websites: They mainly display company images or brands, such as official websites. • Marketing websites: They are commonly used by enterprises and individuals, particularly SMEs, such as cosmetic surgery websites.

Service Category	Service Level	Feature Details	Website Type Identification
		Level 2	• Functional websites: Examples include novel websites, movie websites, online education, live streaming, logistics information query, and train ticket booking. • Service websites: They provide service query, registration, login, and interaction features, such as government websites. • Forum websites: They provide member system, posting, upload, download, and sharing features. • Portal websites: They mainly provide news and information, such as Sohu and Sina. • Consoles, operation platforms, monitoring systems, etc.
		Level 3	• Transactional websites: They mainly provide online transaction features; for example, most ecommerce websites have financial transaction features. • Self-built employee OA systems and settlement systems.
App penetration test	It tests Android and iOS apps to detect possible security vulnerabilities and offers security test reports and improvement suggestions.	Client level 1	Functional: Apps that support interactions, enterprise image display, or daily needs and don't involve financial transactions and virtual currency systems.
		Client level 2	Transactional: Apps that involve financial transactions.

Service Category	Service Level	Feature Details	Website Type Identification
		Server level 1	Functional: Apps that support interactions, enterprise image display, or daily needs and don't involve financial transactions and virtual currency systems.
		Server level 2	Transactional: Apps that involve financial transactions.
Binary penetration test	It tests binary PC program clients such as .exe to detect possible security vulnerabilities and offers security test reports and improvement suggestions.	Client level 1	Functional: Binary programs that support interactions, enterprise image display, or daily needs and don't involve financial transactions and virtual currency systems.
		Client level 2	Transactional: Binary programs that involve financial transactions.
		Server level 1	Functional: Binary programs that support interactions, enterprise image display, or daily needs and don't involve financial transactions and virtual currency systems.
		Server level 2	Transactional: Binary programs that involve financial transactions.

Billing Description

PTS is billed by the number of applications or modules to be tested. Currently, Tencent Cloud can perform tests for web applications, apps, and binary files. The billing rules are as follows:

Service Category	Service Level	Limits	Billing Unit	Tax-exclusive Price (USD/Test)
Web penetration test	Level 1	• Static pages without registration, login, and personal center features • Less than 50 APIs	One second-level domain for general businesses	4,970
	Level 2	• Not involving financial transactions and virtual currency systems. • Less than 60 APIs	One second-level domain for financial transactions/multiple roles/virtual currency systems	8,280
	Level 3	• For OA and settlement systems where no test accounts are provided but only peripheral tests are required, an order can be placed for level 2 • Less than 80 APIs	One second-level domain for large websites	13,250
App penetration test	Client level 1	• Not involving financial transactions and virtual currency systems • For app clients only • Not greater than 200 MB	General app client level 1 - 200 MB	4,970
	Client level 2	• For app clients only • Not greater than 200 MB	Transactional app client level 2 - 200 MB	6,625
	Server level 1	• Not involving financial transactions and virtual currency systems • Less than 50 APIs	General app server level 1 - 50 APIs	3,310
	Server level 2	• Not involving financial transactions and virtual currency systems • Less than 50 APIs	Transactional app server level 2 - 50 APIs	4,970
Binary penetration test	Client level 1	• Not involving financial transactions and virtual currency systems • For binary program clients only • Not greater than 200 MB	General binary program client level 1 - 200 MB	4,970
	Client level 2	• For binary program clients only • Not greater than 200 MB	Transactional binary program client level 2 - 200 MB	6,630

Service Category	Service Level	Limits	Billing Unit	Tax-exclusive Price (USD/Test)
	Server level 1	• Not involving financial transactions and virtual currency systems • For binary program clients only	General binary program server level 1 - 50 APIs	3,310
	Server level 2	• Not involving financial transactions and virtual currency systems • For binary program clients only	Transactional binary program server level 2 - 50 APIs	4,970

Purchase Method

Last updated：2022-09-21 16:49:17

PTS is billed by the number of tests based on the type of the targets to be tested.

Directions

1. Go to the PTS purchase page, select the asset test type and enter the test quantity to be purchased based on the number of applications or modules to be tested, and click **Buy now**.

> Note：

> If you cannot determine the type of the required penetration test, contact us for assistance.

Penetration Testing Service

▌Purchase Instructions

Usage description   We conduct black-box security testing for the application itself and the back-end server interface associated with the application through scanning by automated analysis platform and manual digging by security experts to discover its potential security risks and vulnerabilities and assist in fixing them to raise the security level of the application system. Penetration testing targets includes but not limits to EXE files on platforms, such as, websites, mobile APPs, WeChat Mini Program, and Windows.

Commencements description   Penetration testing is valid for one year after purchase. The service will not be provided after the service expiration date.

Other notes   It is recommended that the service be bought and used immediately to avoid a situation where the service is no longer available because the service expiration date has expired.

▌Select configuration

Penetration testing types	Web penetration testing	WeChat Mini Program Penetration Testing	App penetration testing	Binary Penetration Testing

Evaluate the security of a web-based system by simulating cyber attacks against the target information system.

Penetration testing levels	Web penetration testing class I	Web penetration testing class II	Web penetration testing class III

2. Make the payment in your Tencent Cloud account.

3. After you pay the order, our engineers will contact you for service arrangement.

Payment Overdue

Last updated：2022-08-30 15:09:44

Expiration Alert

From seven days before your PTS service expires, the system will send alerts for expiration to your Tencent Cloud account creator, global resource collaborators, and financial collaborators by email and SMS.

Repossession Mechanism

The PTS service is valid for one calendar year, and from seven days before it expires, the system will send alerts for expiration to you. If it is not renewed after expiration, it will be released within about 24 hours of expiration and become unavailable.

Refund

Last updated：2022-08-30 15:09:44

PTS is not unconditionally refundable. If you have any special reason for a refund, contact us for application.
