Logging in to the Console

Log in to the Tencent Cloud console. If you don't have an account yet, sign up first as instructed in [Signing Up](#).

Activating Service

Log in to the [TTS console](#) and activate the service.

Making a Purchase

TTS services are pay-as-you-go once activated. For more information, see [Purchase Guide](#).

Using TTS

To use the TTS service, you can choose one of the four options below.

Use Method	Target Users	Description	Documentation
Feature trial in the TTS console	Non-business development personnel without a coding background	This method is only for trial but not development.	-
Online feature call through API 3.0 Explorer	Beginners developers with a coding background	This method allows making online calls, verifying signatures, generating SDK code, quickly searching for APIs, etc.	-
Call of APIs for development through coding	Developers familiar with coding	Tencent Cloud has developed an SDK that supports feature development by calling TTS APIs. The SDK currently supports multiple programming languages, including Python, Java, PHP, Go, Node.js, and .NET. You can download the applicable SDK in the documentation of each service.	Quick Server API Connection

Note:

If you need to call APIs for feature development, familiarize yourself with HTTP requests and API calls in advance.

Viewing Calls

Log in to the [TTS console](#) to view the usage of each service provided by TTS.

Quick Server API Connection

Overview

This document describes how to use API 3.0 Explorer to debug TTS APIs online and quickly integrate the Tencent Cloud SDK corresponding to the APIs into your local project.

Directions

Activating TTS service

Before calling TTS APIs, you need to go to the [TTS console](#), read the User Agreement, select **I have read and agree to the User Agreement**, and click "Activate now".

After the service is successfully activated, you will get the free tiers of calls for each service, which can be viewed on the [Resource Package Management](#) page. In addition, you can also purchase resource packages for various speech recognition service on the TTS purchase page. After the free tiers and number of resource package calls are used up, API calls will be billed in the pay-as-you-go mode and settled daily. For billing details, see [Purchase Guide](#).

Debugging TTS APIs

After the TTS service is successfully activated, go to the TTS [API 3.0 Explorer](#) online API debugging page, select the API to be called, and enter the **input parameters**. You can view the specific descriptions of input parameters in the **Parameter Description** tab on the API 3.0 Explorer UI.

Note :

- When you initiate a request in the online call module, the platform gets the temporary access keys of the current account through the information of the logged-in user and perform operations on the account.
- Initiating a request is a sensitive operation, and you need to complete authentication for verification purpose. This operation is real and may incur fees. We recommend you carefully read the [Purchase Guide](#) to learn more about fees.

After entering the **Input Parameters**, select the **Code Generation** tab, and you can see the automatically generated

code in different programming languages (Java, Python, Node.js, PHP, Go, .NET, and C++), and some fields in the generated code are related to the entered content. If you need to adjust the input parameters, you can regenerate the code after modifying the parameter values on the left.

Select the **Online Call** tab and click **Send Request** to make a real request for your debugging and reference.
