## Can Private Link services under the same account be connected automatically?

Yes. You can choose **Yes** for **Accept endpoint connection requests** when creating an endpoint service. If you choose **No**, the endpoint status is **Pending acceptance** after it is created. You need to manually accept the request to make it **Available**. For details, see [Getting Started](#).

## Can I use Private Link to connect VPCs in different regions?

No. Private Link is used for VPCs in the same region. To connect VPCs across regions, please use Cloud Connect Network (CCN).

## What's the difference between cross-VPC connections provided by Private Link and Cloud Connect Network?

Cloud Connect Network connects the resources in two VPCs, while Private Link provides one-way communication based on IP+port, which enables service consumers to access service providers.

## What are the main features of Tencent Cloud Private Link?

Private Link provides one-way communication from one VPC to another in the same region. It can be used together with other hybrid cloud connection services such as VPN, CCN, and Direct Connect to access from IDCs and VPCs in other regions.
