FAQs

Billing

Last updated : 2020-05-12 14:47:44

What are the billing methods for CDH instances?

Currently, CDH instances are sold on a pay-as-you-go basis.

Is there a charge for assigning dedicated CVMs on a CDH instance?

Purchase of a CDH instance includes the physical server's CPU, memory, and local storage resources. Therefore, no extra fees will be incurred when you assign dedicated CVMs on a CDH instance that you have purchased. However, you need to pay for the cloud disks and public network bandwidth mounted on the dedicated CVMs.

Hosts

Last updated : 2020-05-12 14:47:44

What is the difference between a CDH instance and a common CVM?

A CDH instance is a dedicated physical server equipped with a virtualized environment, which is completely isolated from the servers of other tenants with all its resources exclusive for your use. After purchasing a CDH instance, you can use it by assigning dedicated CVM instances on it, schedule its physical machine resources, and customize dedicated CVM configurations. A common CVM is a physical server whose resources are shared by multiple tenants.

Do CDH instances support capacity expansion?

No. CDH instances are physical machines and their hardware configurations cannot be modified after purchase. Please evaluate your requirements carefully before purchasing CDH instances.

CVM-related

Last updated : 2021-11-10 10:04:07

What are the differences between a CVM assigned to a CDH and a CVM instance?

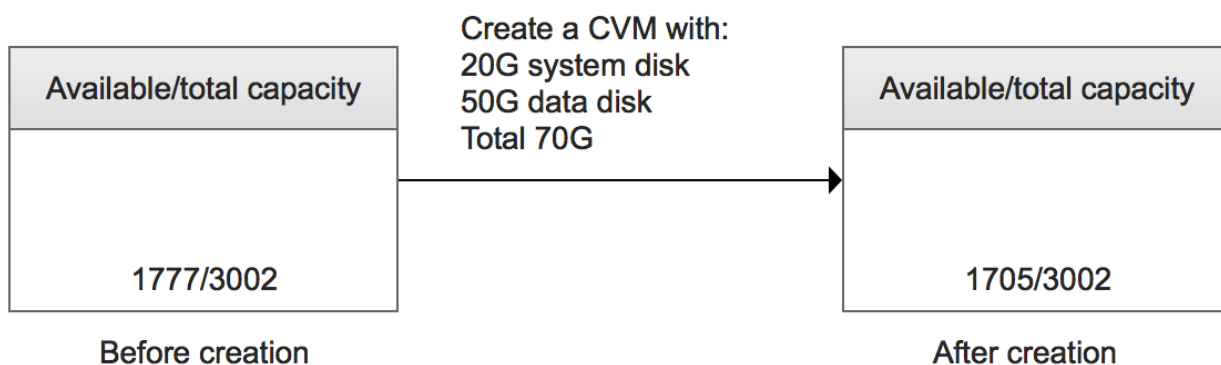

A Cloud Virtual Machine (CVM) deployed on a CDH runs in a single-tenant environment, whereas a CVM instance is a physical server resource shared by multiple tenants. The CVM on a CDH supports custom specifications, whereas a CVM instance does not. Beyond that, they provide the same features.

How is a created CVM instance assigned to multiple selected CDHs?

If you select multiple CDHs when creating a CVM instance, it will be created on any one of these hosts.

Why does a CVM instance occupy 2 GB more disk space than its specification?

You can customize the sizes of the system disk and data disk when creating a CVM instance. In addition to the planned disk storage, another 2 GB capacity is used to store additional configuration information.

Does CVM on a CDH support migration?

- Yes. Instances can be migrated among different dedicated hosts. For detailed directions, see [Migrating Instances Among CDHs](#).

Does CVM on a CDH support configuration adjustment?

Yes. To configure the CVM on a CDH, log in to the [CVM console](#), locate the target CVM instance in the instance list, and click **More > Resource Adjustment > Adjust Configuration** in the **Operation** column. For more information, see [CVM Configuration Adjustment](#).
