Preparations

Download and install the SDK for your language in Tencent Cloud SDK Center.

If this is your first time using BatchCompute, please see [Preparation](#).

For more information about API parameters, see [API Documentation](#).

Access Steps

1. Select **BatchCompute** and find the corresponding API.
2. Enter **Personal key** and **Input parameters** according to the help prompts.
3. (Optional) Select **Only view required parameters**.
4. In the **Code generation** column on the right, copy the different language code to local execution.
5. Before the producer is used, a real request is initiated in the **Online calling** column to verify whether the results meet expectations.

Sample Codes

Submitting a Job (Python Version)

```
from tencentcloud.common import credential
from tencentcloud.common.profile.client_profile import ClientProfile
from tencentcloud.common.profile.http_profile import HttpProfile
from tencentcloud.common.exception.tencent_cloud_sdk_exception import TencentCloudS
from tencentcloud.batch.v20170312 import batch_client, models
try:
    cred = credential.Credential("your secret id", "your secret key")
    httpProfile = HttpProfile()
    httpProfile.endpoint = "batch.tencentcloudapi.com"

    clientProfile = ClientProfile()
```

```
clientProfile.httpProfile = httpProfile
client = batch_client.BatchClient(cred, "ap-guangzhou", clientProfile)

req = models.SubmitJobRequest()
params = '{"Placement":{"Zone":"ap-guangzhou-3"},"Job":{"JobName":"demo","JobDe
req.from_json_string(params)

resp = client.SubmitJob(req)
print(resp.to_json_string())

except TencentCloudSDKException as err:
    print(err)
```

Querying a Job (Python Version)

```
from tencentcloud.common import credential
from tencentcloud.common.profile.client_profile import ClientProfile
from tencentcloud.common.profile.http_profile import HttpProfile
from tencentcloud.common.exception.tencent_cloud_sdk_exception import TencentCloudS
from tencentcloud.batch.v20170312 import batch_client, models
try:
    cred = credential.Credential("your secret id", "your secret key")
    httpProfile = HttpProfile()
    httpProfile.endpoint = "batch.tencentcloudapi.com"

    clientProfile = ClientProfile()
```

```
clientProfile.httpProfile = httpProfile
client = batch_client.BatchClient(cred, "ap-guangzhou", clientProfile)

req = models.DescribeJobRequest()
params = '{"JobId":"job-mhgy1dot"}'
req.from_json_string(params)

resp = client.DescribeJob(req)
print(resp.to_json_string())

except TencentCloudSDKException as err:
    print(err)
```

Submitting a Job (Java Version)

```
import com.tencentcloudapi.common.Credential;
