Product Introduction

Overview

Last updated: 2025-12-05 17:21:41

Tencent Interactive Whiteboard (TIW) provides a complete set of multi-person real-time interactive whiteboard services to break the barriers for teacher-student information transfer during online teaching. Compared with traditional face-to-face teaching, it has more comprehensive, straightforward, and diverse features, such as interactive graffiti, [graffiti trajectory synchronization](#), [document presentation synchronization](#), document sharing, media sharing, document transcoding, real-time synchronous recording of whiteboard and audio/video, and replay. With high flexibility, ease of use, and scalability, it can help you deliver a vivid interactive experience comparable to offline teaching and significantly improve the quality of online teaching.

Feature Overview

Tencent Interactive Whiteboard provides the following core features:

Features	Description
Tencent Interactive Whiteboard	Ultra-low latency, real-time interaction, and global interconnection in whiteboard rooms, supporting the upload and display of various file formats, offering rich whiteboard operation tools, and supporting multi-person real-time interaction.
Static transcoding	Document to image conversion, supporting the conversion of PPT, PPTX, WORD, PDF, and other file formats into images, enriching whiteboard presentation materials.
Dynamic transcoding	Document to webpage conversion, supporting the conversion of PPT and PPTX into webpages, retaining the original animation effects, audio, and video, helping to present information completely and vividly.
Whiteboard recording and playback	Supports whiteboard video recording, recording all operations on the whiteboard, dynamic PPT, and custom events in real-time. Supports multi-platform playback, with forward, backward, and playback speed options, allowing you to review all content of the real-time whiteboard room anytime, anywhere.

Product Features

The interactive whiteboard offers a variety of tools and components to meet different needs, enhancing the interactive experience for whiteboard users.

Basic Feature

Tool Name	Description
Brush	Supports graffiti brushes in various colors and thicknesses
Eraser	Supports quick erasure of brush strokes
Selection tool	Supports selecting single or multiple objects for editing
Text tool	Supports text insertion, with options for different fonts, font sizes, and font colors
Basic shapes	Supports drawing basic shapes like circles, ovals, rectangles, triangles, diamonds, cubes, cylinders, and cones
Custom shapes	Supports custom shape teaching aids: experimental instruments, musical notes, and other shapes
Line	Supports inserting lines
Arrow	Supports inserting arrows
Laser pointer	Supports using laser pointer
Eraser	Supports segment erasing and whole erasing
Clear	One-click to clear all elements on the whiteboard
Hand tool	Supports dragging the page
Undo, redo	Supports quick undo and redo
Copy, paste	Supports copy and paste editing

Advanced Features

Name	Description
Document courseware preloading	Support transcoding document courseware preloading to local, solving the problem of slow loading of resources such as images

Insert file	<p>Support uploading the following file formats, and after transcoding, the file content is synchronized and shared on the whiteboard:</p> <ul style="list-style-type: none"> • Dynamic demonstration file: PPTX, PPT • Static demonstration file: PPTX, PPT • Text file: DOC, DOCX • Table file: XLS, XLSX • Image file: JPG, JPEG, PNG, BMP • Audio file: MP3 • Video file: MP4 • H5 file: HTML5 • Other file formats: pdf, txt
Track Sync	Support real-time track sync for multiple persons' screens
Permission Control API	<p>Support setting operation permissions for whiteboard and graphic elements:</p> <p>Whiteboard: scrolling and scaling operations.</p> <p>Graphic elements: create, edit, move, delete, and clear operations</p>
Whiteboard Adaptive	Support whiteboard adaptive to parent container dimensions
Recorded Replay	Support recording and playback of whiteboard canvas operation content
View Control	Support view following, syncing the anchor's screen view to the audience
Cursor Tool	Support cursor position display, cursor teaching aid status, and cursor operator name display
Page Scaling	Support zoom in, narrow down the page, display current percentage, and return to initial size and position
Whiteboard Pagination	Support adding multiple whiteboard pages
Pagination control	Support displaying total pages, current page, and jumping to the previous page, next page, homepage, and last page
Side preview	Support previewing multi-page content, inserting blank pages, and deleting pages

Documentation Center	Support managing files uploaded in the whiteboard room
Custom Event	Support expanding room message notification feature based on the whiteboard
Customize global status	Support maintaining the status of online rooms without worrying about status loss
Whiteboard information	Log information supports inquiry: whiteboard ID, whiteboard type, whiteboard page number, content width and height, shared authentication information, etc.
File information	File information supports inquiry: file ID, file type, file page number, content width and height, shared authentication information, etc.

Supported Platforms

Tencent Cloud Interactive Whiteboard **achieves cross-platform connectivity**. The specific platform support is shown in the table below:

Platform	SDK and Compatibility	Demo	Demo Source Code
iOS	Supported; compatible with iPhone or iPad running iOS 8.0 or later.	Supported	Supported
Android	Supported; minimum compatibility with Android 4.2 (SDK API Level 17).	Supported	Supported
Windows	Supported; compatible with Windows 7 or later.	Supported	Supported
Mac OS	Supported; compatible with Mac running OS X 10.10 or later.	Supported	Supported
Web	Supported; for detailed compatibility, see Initialization (Web) .	Supported	Supported
WeChat Mini	Supported; compatible with WeChat version 6.6.6 or later.	Supported	Supported

Program			
---------	--	--	--

Note:

- For SDK downloads for each platform, please see [SDK Download](#).
- For demo experiences on each platform, please see [Demo](#).

Advantages

Ultra-Low Latency, Stable and Reliable

- Tencent Cloud's self-developed engine ensures whiteboard operation latency as low as 100ms, maintaining a smooth experience even in poor network environments, saving bandwidth resources while creating an interactive experience similar to offline classroom teaching.
- The service is deployed at multiple global nodes, providing a smooth experience for users in different regions through local access and intelligent routing control strategies.
- Global distributed cluster deployment provides a dual disaster recovery plan, ensuring high availability of the service. Single room capacity can be configured on demand, with no limit on concurrent capacity.

Fully Featured, Multi-Platform Support

Provides a variety of tools, supporting multiple users for doodle drawing, a complete set of brush annotation tools, document sharing, document transcoding, teaching video recording, and playback.

Covers mainstream online classroom platforms such as Windows, macOS, WEB, iOS, Android, and mini programs.

Easy to Use, Free Expansion

Provides SDKs supporting all platforms, allowing quick integration with just a few lines of code. It can be used simultaneously with [audio and video](#), [IM services](#), allowing users to freely combine and match as needed.

Synchronous Recording of Whiteboard Content and Teaching Audio and Video

Industry-leading synchronous recording solution solves the issues of asynchronous presentation and high post-production mixing costs caused by separate recordings of whiteboard content and teaching audio and video, easily completing the entire classroom teaching recording process.

Multi-Format Document Transcoding

Supports dynamic and static document conversion, converting PPT, Word, PDF, and other files into HTML5 pages or images. Compared to static conversion, dynamic conversion retains animations in courseware, providing more complete information transmission and better visual experience.

Private Deployment

Supports multiple deployment forms such as private cloud and hybrid cloud, supports active-active architecture, and encrypted channel transmission to ensure data security and integrity.

Use Cases

Online education

The interactive whiteboard can be widely used in online STEAM education, vocational education, language training, corporate training, and institutional teaching classroom scenarios, breaking the barriers of information transmission between teachers and students in online teaching. Teachers can demonstrate courseware and highlight learning points. Students can operate synchronously online, providing intuitive feedback on course learning mastery.

Remote Meeting

The interactive whiteboard can be widely used in industry scenarios such as remote meetings, digital government, and remote medical care. It is a powerful tool for remote online meetings, supporting online presentation of various document formats, making presentations more vivid and communication more efficient. It supports multi-person online collaborative annotation, cloud review, and cloud meeting minutes, improving communication and collaboration efficiency, and conveying inspiration and key points more directly.

Financial Video Signing

The interactive whiteboard can be widely used in digital finance, video signing, remote witnessing, and signature confirmation financial scenarios, handling business remotely to meet industry compliance regulatory requirements. Both parties can use the whiteboard for cloud signing and signature confirmation, with signing documents encrypted for storage.

Game Socializing

Widely used in sketch guessing game, interactive doodling, and other entertainment scenarios, providing various brush tools, supporting collaborative pattern drawing, enhancing interactivity, supporting online doodle, allowing inspiration to flow freely, and interactive screen recording to capture exciting interactive moments.

Use Limits

Document Requirements

Last updated: 2024-07-23 10:33:51

General Specifications

1. Please check if the file name contains special characters. It is recommended to use only Chinese, English, and numbers. File names with special characters may cause transcoding failure.
2. Please check if the path of the file storage contains special characters. Paths with special characters may cause transcoding failure.
3. The document must be editable. "Read-only", "encrypted", or other protected documents are not supported and may cause transcoding failure.
4. For creating dynamic documents, please use Microsoft Office 2013 or higher versions. Files created with lower versions of Microsoft Office or other office software such as WPS, Keynote, Microsoft Office 2003, Microsoft Office 2007, etc., are not supported.
5. For creating static documents, please use Microsoft Office 2013 or higher versions. Other office software such as WPS can also be used.

Dynamic Document Specifications

Note:

- **Dynamic Document:** During the creation of PPT or PPTX, animation effects, audio and video, and other dynamic elements are inserted.
- **Dynamic Transcoding:** Convert dynamic documents (PPT, PPTX) to web pages, retaining the animation effects, audio, and video from the original document to help present information completely and vividly.
- **Dynamic Document Transcoding Priority:** The default dynamic transcoding initiated has a normal priority, supporting dynamic documents within 500 pages. If the dynamic document exceeds 500 pages, low priority transcoding must be initiated.

Normal Priority:

- **Dynamic Document Types:** PPT, PPTX.
 - Document Download Timeout Period: 2 minutes
 - Document pages: 500 pages
 - Maximum support: 200MB

Low priority:

- Dynamic document types: PPT, PPTX.
 - Document download timeout period: 10 minutes
 - Document pages: 2,000 pages
 - Maximum support: 200MB

Note

Low priority transcoding refers to transcoding tasks with the parameter Priority: low. These tasks support larger files and more PPT pages but have longer queuing times, possibly being processed during off-peak hours (e.g., midnight). If your scenario involves many PPT pages and large files, you can choose the low priority dynamic transcoding option, but note that you need to initiate the transcoding task at least 1 day in advance before the class (using the transcoded document in the whiteboard).

1. It is recommended that the size of a single PPT page does not exceed 300KB (including text, images, and audio/video files). Large PPT files or single pages may cause slow loading or failure.
 - File transcoding is subject to resource limits and queuing logic. The transcoding time is affected by file size, so when there are many transcoding tasks or large files, the queuing or transcoding time will increase, causing the submitted transcoding tasks to take longer to complete.
 - For PPT files that need to be shared, it is recommended to transcode in advance (e.g., submit the transcoding task one day in advance) so that they can be directly loaded when used, avoiding long waiting times during classes/meetings and improving the experience.
2. PPT files use the default Chinese and English fonts of the operating system. Do not use self-installed fonts, as non-default fonts may cause text garbling and PPT style errors. See [Fonts Supported by PowerPoint Files](#).
3. The slide change method for dynamic PPT slides must be set to "slide change on mouse click" to use the **click** tool to turn the slides. Otherwise, clicking on the dynamic PPT file page will not turn the slides.
4. Do not insert Flash files in PPT files, as Flash playback is not supported.
5. Try not to insert audio and video files in PPT files. If you must insert them, please follow these standards:
 - Currently, embedded audio and video in PPT only support the play, suspension, and drag and drop progress of MP4 video files and MP3 audio files. If you want to embed other formats of audio and video files, please convert the audio files to MP4 or MP3 before inserting them into the PPT.

- When inserting MP4 videos into dynamic PPT files, do not set the video to play automatically after switching pages or clicking on animation steps, as this will cause multi-end display synchronization issues in the PPT file.
 - When inserting audio and video into PPT, do not set them to play automatically.
6. When inserting GIF images into PPT, pay attention to the following standards:
- Set the GIF image attribute to loop before inserting it into the PPT, otherwise, the GIF animation will not play normally after transcoding.
 - Do not add softening edge effects or other special effects to GIF images, as this will cause the GIF animation to not play normally after transcoding.
 - Do not crop GIF images, as this will cause abnormal dimension display after transcoding.
7. Do not insert external links in PPT files, as opening external links is not supported.
8. Do not retain **"ink strokes"** doodling in the original PPT, as this may cause transcoding failure. You can open the PPT with PowerPoint, then **Overview > Select > Selection Pane > Check if there are "ink strokes"**.
9. Notes for creating PPT animation effects:
- Do not add unsupported animations. Refer to the [Animations Supported by PowerPoint Files](#). The following 5 animations are not supported: Bold Flash, Underline, Grow With Color, Bold Reveal, Wipe.
 - Try to use no more than 5 animations per PowerPoint slide, as it may cause the file to load slowly or fail.
 - Try to use no more than 1 animation per trigger on each PowerPoint slide, as it may cause file synchronization issues across different devices.
 - Avoid using cross-page animations on each PowerPoint slide, as it may cause file synchronization issues across different devices.
 - Do not set animations/links that cause PPT page turning, as it may lead to file desynchronization across devices.
 - When adding dynamic effects to text, do not add them while editing the text. Add dynamic effects in non-editing mode.
 - Do not add 3D dynamic effects to elements.
 - Do not set loop dynamic effects for the same element.
 - Do not overlay elements on the PPT page, as the overlay layer will affect the display and click results of the elements.
 - Do not click to execute the next animation before the current animation is completed, as it may lead to inconsistent animation results across devices.
 - Use different text boxes to display text, mathematical formulas, etc., with each animation step corresponding to a text box. Otherwise, it may affect the normal

playback of animation steps after transcoding.

10. To ensure the clarity of the PPT file, it is recommended:

- Set the PPT page size to twice the default width and height (when creating a PPT, select **Design > Slide Size > Custom Size Menu**), i.e., 50 cm width and 28 cm height for 16:9 ratio; 50 cm width and 38 cm height for 4:3 ratio.
- Transcode through a high-definition interface, but note that using high-definition transcoding will increase the file size, which may lead to slow file loading or failure.

11. Do not set the PPT page as a hidden slide in the left navigation window of the PPT, as it may cause the page to not display properly.

12. It is recommended not to add a fluorescent background to text in PPT/PPTX documents.

Static Document Requirements

Note:

1. Static Transcoding: Document to Image. Supports converting presentation files, text files, table files, image files, etc., into images. Dynamic elements such as animations, audio, and video in the original document are not displayed.
2. The size of a single static document cannot exceed 200 MB, and the page number cannot exceed 5,000 pages.

- Presentation files: PPTX, PPT, POT, POTX, PPS, PPSX, DPS, DPT, PPTM, POTM, PPSM.
- Text files: DOC, DOCX, DOT, WPS, WPT, DOTX, DOCM, DOTM.
- Spreadsheet files: XLS, XLT, ET, ETT, XLSX, XLTX, CSV, XLSB, XLSM, XLTM, ETS.
- Other format files: PDF, TXT, LRC, C, CPP, H, ASM, S, JAVA, ASP, BAT, BAS, PRG, CMD, RTF, LOG, XML.

1. Use the operating system default Chinese and English fonts in static documents. Do not use self-installed fonts.
2. Non-operating system default fonts may cause text garbled and PPT style errors. Please refer to [Fonts Supported by PowerPoint Files](#).
3. Keep the page width consistent for all pages in the same file, otherwise, some pages may not display completely or may jitter.

Other Document Specifications

Note:

1. Audio file: MP3 format, single file size not exceeding 50 MB.

2. Video file: MP4 format, single file size not exceeding 500 MB.
3. Video encoding standard is limited to H.264.

- Audio files: MP3.
- Video files: MP4.
- Image files: JPG, JPEG, PNG, BMP.

Animations Supported by PowerPoint Files

Last updated: 2024-12-19 17:15:45

It is recommended that developers use the following supported animation effects when creating PowerPoint files. Avoid using other unsupported animation effects, as this may result in transcoding failure, abnormal animation effects after transcoding, or inconsistency in animation display across multiple platforms.

Basic Animation Effects

Other Limits

Last updated: 2024-12-19 17:17:53

1. 1. In-Class Recording

- A room can only initiate 1 in-class recording task at a time.
- A single whiteboard application can run up to **100** recording tasks simultaneously. If special scenarios require quota adjustments, please [submit a work order](#) to apply.

2. Whiteboard Streaming

- A room can only initiate 1 whiteboard streaming task at a time.
- A single whiteboard application can run up to **100** stream push tasks simultaneously. If special scenarios require quota adjustments, please [submit a work order](#) to apply.

3. Document Transcoding

A single whiteboard application can run up to **20** dynamic transcoding tasks and up to **40** static transcoding tasks simultaneously. If you need to adjust the quota for special scenarios, please [submit a ticket](#) to apply.

4. Number of Whiteboard Pages

- The maximum number of whiteboard pages in a single room is **2,000 pages**. If you need to adjust the quota for special scenarios, please [submit a ticket](#) to apply.
- Calculation Rules for the Number of Whiteboard Pages in a Single Whiteboard Room:
 - A whiteboard room will have one default whiteboard page, which cannot be deleted.
 - Adding a whiteboard page (`createBoard`) will create one whiteboard page; deleting a whiteboard page (`deleteBoard`) will delete one.
 - Static transcoding and dynamic transcoding (`addTranscodeFile`) are based on the input parameter `pages`. If `pages` is 10, the file will create 10 whiteboard pages. Deleting the file (`deleteFile`) will delete 10 pages.
 - A video file (`addVideoFile`) creates one whiteboard page; deleting the file (`deleteFile`) will delete one page.
 - An H5 file (`addH5File`) creates one whiteboard page; deleting the file (`deleteFile`) will delete one page.
 - An image group file (`addImagesFile`) is based on the length of the input parameter `urls` array. If the length of `urls` is 10, the file will create 10 whiteboard pages. Deleting the file (`deleteFile`) will delete 10 pages.

5. In-Class Data Storage

The rules for in-class data storage are as follows:

- In-class data storage is based on days, with a default retention period of 7 days (calculated from the last operation data in the class, counting forward 7 days. If there is no class data operation within these 7 days, the class data will be cleared).
 - Scenario 1: Classroom A: The last operation time for classroom data was: 2022-04-01 12:00:00; if there is no operation data for this classroom within 7 days, the classroom data will be cleaned up on 2022-04-08 12:00:00;
 - Scenario 2: Classroom B: The first last operation time for classroom data was: 2022-04-01 12:00:00; the second last operation time for this classroom was: 2022-04-06 13:00:00; if there is no operation data for this classroom within the next 7 days, the classroom data will be cleaned up on 2022-04-13 13:00:00;
- Data that is cleaned up cannot be recovered.

6. Public Storage Bucket Usage Restrictions

If **bucket configuration** is not performed, the resource files generated by document transcoding and whiteboard recording will be stored in the **public storage bucket of Interactive Whiteboard**. The storage time for transcoding results is **7 days**, and the storage time for video files is **3 days**, as shown in the table below:

Resource type	Validity Period
Recording Video File	3 Days
Document transcoding result	7 Days

After the storage validity period, resource files in the bucket will be **automatically deleted**. It is recommended to refer to this document for **bucket configuration** before using transcoding or recording features, to facilitate managing the access permissions and lifecycle of resource files.

7. Whiteboard Interactive Graffiti

If you use IM as the signaling channel for whiteboard interactive graffiti, the following limits apply to IM:

1. For applications created in the interactive whiteboard console, the default package is **whiteboard experience edition**, maximum number of non-live group members: 20 members/group, free peak group quantity: 100 groups/month.
2. For applications imported from IM, please refer to IM [use limit](#) for specific use limits.

3. You can upgrade the application type from the IM console. Refer to the document [Creating and Upgrading an Application](#) for the operation guide.
