Overview

Last updated: 2023-08-24 16:43:55

Tencent Cloud Organization is a multi-account management service. With this service, you can create a group organization and manage your cloud accounts and those of your subsidiaries by inviting or creating them within the organization. You can set financial management policies, share resources, and manage logs for accounts based on your specific needs. These features cater to the budget, security, and compliance requirements of enterprises.

This user guide introduces the key concepts of Tencent Cloud Organization and provides instructions on how to use the service.

Product Features

Tencent Cloud Organization offers the following features:

Managing Organization Groups

You can create and manage organizations in the Tencent Cloud Organization Console. An organization can have up to five levels of department nodes.

Centralized Management of Tencent Cloud Accounts

You can incorporate your existing accounts into an organization for centralized management. Additionally, you can invite other accounts to join your organization or directly create accounts within the organization.

Centralized management of member financial information

Organization group administrators can set financial management policies for member accounts within the group organization. Based on the configured policies, administrators can switch their current identity in the billing console to view cost and consumption information for member accounts.

Member Resource Sharing

The organization admin can create shared units within the group organization using the resource sharing feature. When resources are shared with specified members, they can view and utilize the shared resources in the resource list.

Member Audit Management

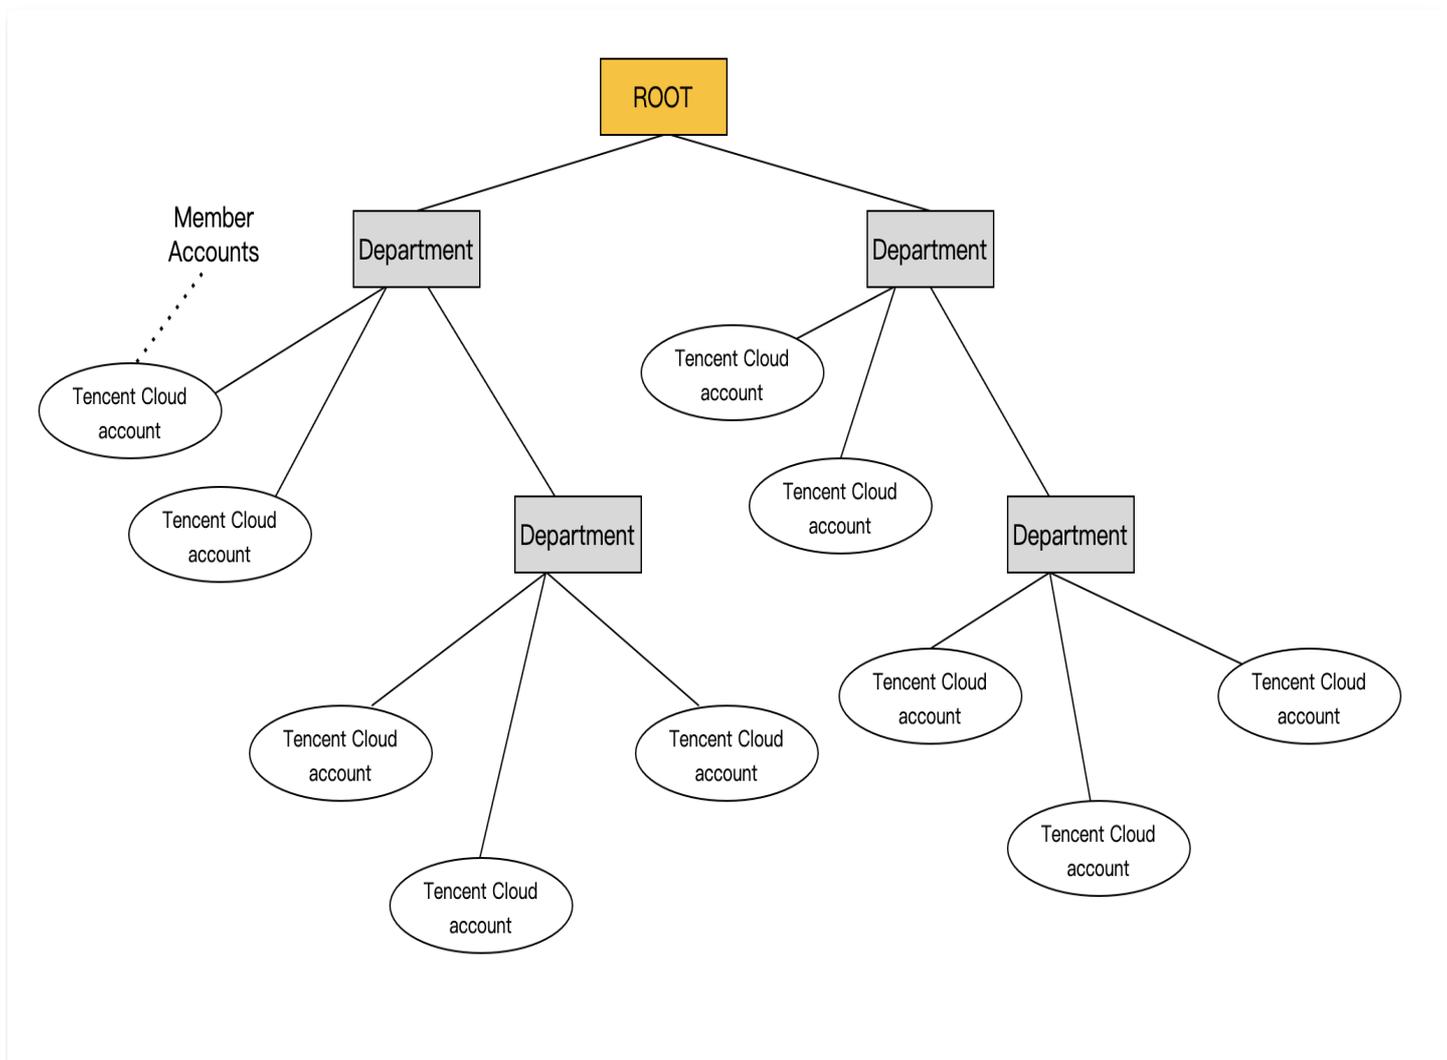

Organization administrators can create tracking sets through the [CloudAudit Console](#) to deliver logs of all members to Cloud Object Storage (COS) or Cloud Log Service (CLS) for convenient auditing of member operations.

Relevant Concepts

Last updated: 2023-08-25 10:43:51

This document presents the primary concepts of Tencent Cloud Organization management, allowing you to quickly access relevant information through the following content.

The diagram below illustrates a basic organization structure with 10 accounts, divided into 4 departments under the root. Please refer to the content in this document to understand the meaning of the items in the diagram.

Root

The parent container for all accounts within the organization.

Note

Currently, only one root is supported within an organization. When creating an organization, Tencent Cloud Organization management will automatically create the root.

Organization

Create a hierarchical structure to consolidate Tencent Cloud accounts.

You can centrally view and manage all accounts within your organization through the [Tencent Cloud Organization Console](#). An organization consists of one management account and multiple member accounts. You can organize accounts using a hierarchical tree structure, with the root node at the top and departments nested under the root node. Each account can be placed directly in the root node or within one of the hierarchical departments.

Department

Nodes under the root are used to store accounts, and departments can also contain other departments. This allows you to create an inverted tree-like hierarchy, with the root node at the top, department branches extending downward, and accounts as the leaves of the tree.

Account

A standard Tencent Cloud account containing your Tencent Cloud resources.

- **Managing Account:**

The account that creates the organization is the managing account, and there is only one managing account per organization.

- **Member Accounts:**

Other accounts within the organization are referred to as member accounts. In the organization, administrators can create accounts, invite existing accounts to join the organization, remove accounts from the organization, manage invitations, and apply policies to entities within the organization (root, departments, or accounts). If an account has already joined an organization, it cannot join another organization.

Organization Invitation

The process of inviting other accounts to join your organization. Invitations can only be sent by the organization's master account and can be extended to account IDs associated with the invited account. Once the invited account accepts the invitation, it becomes a member account within the organization.
